INGREDIENTS

Skimmed milk *1
Whey powder partly demineralized *
Vegetable oils* (Palm oil*2, Sunflower oil*, Rapeseed oil*)
Lactose*
Skimmed milk powder*1
Docosahexaenoic acid from fish oil
Calcium carbonate
Arachidonic acid from oil from Mortierella alpina
Potassium chloride
Choline bitartrate
Sodium chloride
Vitamin C
Ferrous sulphate
Zinc sulphate
L-tyrosine
L-tryptophan
Copper sulphate
Bifidobacteria cultures (B. breve, B.bifidum, B.infantis, B.longum)
Vitamin E
Vitamin A
Sodium selenite
Vitamin D
Niacin
Manganese sulphate
Pantothenic acid
Vitamin B12
Vitamin K
Folic acid
Biotin
Vitamin B1
Vitamin B6
Potassium iodate

1 Organic milk from the Allgäu

2 Organic palm oil from sustainable cultivation

* from organic production

SINCE 1911

November 2022

Lactana® ORGANIC Infant Milk PRE

PREPARATION

1. Boil the drinking water needed and leave to cool to about 40°C to 50°C.
2. Put half of the water in the bottle - before use ensure the bottle and teat have been sterilised in boiling water.
3. Pour the required amount of powder in the bottle with the measuring spoon.
Ensure that the measuring spoon is always level.
4. Close the bottle and shake vigorously. Fill with remaining water and then shake vigorously again.
5. Allow the contents of the bottle to cool to drinking temperature. Check temperature before giving to the baby!

PROPERTIES

- * contains DHA (Docosahexaenoic acid, according to law.) DHA is an omega-3 fatty acid
- > contains valuable Bifido cultures
- > contains as carbohydrate only milk sugar (lactose)
- > can be fed from birth onwards until the end of the bottle-feeding age, if the baby is not being breastfed or to complement breastfeeding
- > can be fed as needed – as often and as much the baby wants to drink
- > is of a similar consistency as breastmilk (thin liquid).
Therefore, do not extend the hole in the teat, so that your baby has to suck as strong as at the breast
- > fulfils the highest demands on quality and complies with the latest state of nutritional science
- > corresponds to the standard of the EU organic regulation:
high-quality raw materials from controlled organic cultivation are used

IMPORTANT INFORMATION

Breastfeeding is always best for your baby, as mother's milk provides all the nutrients that your child needs for healthy development. If you want to use infant formula, consult your midwife, your paediatrician, or your medical centre.

Regular or ongoing contact with foods that contain carbohydrates can damage teeth. It can cause serious damage to teeth (caries) and lead to impairments in the baby's health. Like all infant formulas, **Lactana Organic Infant Milk PRE** contains carbohydrates such as milk sugar (lactose). So once the baby doesn't want any more, the bottle should be taken away. Do not give the baby the bottle to use as a pacifier or to suck on constantly.

After the first tooth appears, ensure that the baby's teeth are regularly cleaned

HOW SUPPLIED

Powder: package with 600g (2 airtight inner bags à 300g), packed under protective atmosphere
